Use ChatGPT For Frontend States

UI prompts should include loading, empty, error, success, and mobile states.

Best way to use it:

â€¢ Describe component.

â€¢ List states.

â€¢ Ask for accessibility notes.

Copy-ready prompt:

Design a frontend component for [feature]. Include desktop/mobile layout, loading, empty, error, success states, accessibility, and data needed.

Quality check:

â€¢ All states are present.

â€¢ Mobile layout works.

â€¢ Accessibility is considered.

DropTicks note:

Use ChatGPT like a workstation, not a magic answer box. Give it the role, goal, input material, constraints, expected output format, and review criteria. The stronger your workflow, the better the result.
