Use ChatGPT For Laravel Workflows

Laravel prompts improve when you name migrations, models, routes, policies, and tests.

Best way to use it:

â€¢ Describe feature.

â€¢ Ask for migration/model/controller/view/test plan.

â€¢ Use project conventions.

Copy-ready prompt:

Plan a Laravel feature for [feature]. Include migration, model relationships, controller methods, validation, routes, Blade views, policies, and tests.

Quality check:

â€¢ Plan matches Laravel conventions.

â€¢ Relationships are clear.

â€¢ Tests cover permissions.

DropTicks note:

Use ChatGPT like a workstation, not a magic answer box. Give it the role, goal, input material, constraints, expected output format, and review criteria. The stronger your workflow, the better the result.
