Use ChatGPT For SQL Help

SQL prompts need schema, desired output, and performance constraints.

Best way to use it:

â€¢ Paste schema.

â€¢ State desired rows.

â€¢ Mention database engine.

â€¢ Ask for indexes if needed.

Copy-ready prompt:

Write a [database] SQL query. Schema: [schema]. Goal: [goal]. Include explanation and index recommendations if performance matters.

Quality check:

â€¢ Query matches schema.

â€¢ No nonexistent columns.

â€¢ Performance notes are realistic.

DropTicks note:

Use ChatGPT like a workstation, not a magic answer box. Give it the role, goal, input material, constraints, expected output format, and review criteria. The stronger your workflow, the better the result.
