

DropTicks AI Resource

LlamaIndex Framework Developer Tool

Framework for building LLM apps with data connectors, RAG pipelines, agents, structured extraction, evaluation, and observability integrations.

Builder notes

Use when the main product challenge is connecting private knowledge, documents, structured data, and retrieval workflows to LLM behavior.

Why use this

â€¢ Use this when the main challenge is connecting private documents, structured data, retrieval, agents, and evaluation into an LLM application.

Who can use this

â€¢ AI engineers, data engineers, RAG builders, knowledge-management teams, and companies building document-heavy AI products.

Prerequisites

â€¢ Python knowledge, understanding of embeddings and retrieval, access to target documents/data, and awareness of data privacy requirements.

System requirements

â€¢ Python environment, vector store or database when needed, embedding/model provider access, document storage, and enough compute for indexing and retrieval workflows.
