

DropTicks AI Resource

Ollama Developer Tool

Local model runner for testing and serving open-weight LLMs on developer machines and internal environments.

Builder notes

Use for local prototyping, privacy-sensitive demos, model comparison, offline workflows, and lightweight internal AI tools.

Why use this

â€¢ Use this for local model experimentation, offline demos, privacy-sensitive prototypes, and fast comparison of open-weight models.

Who can use this

â€¢ Developers, AI engineers, founders, educators, and internal teams testing local LLM workflows before deciding on hosted or self-hosted deployment.

Prerequisites

â€¢ Basic command-line usage, understanding of model size tradeoffs, and enough local hardware to run the selected model comfortably.

System requirements

â€¢ macOS, Linux, or Windows support per Ollama documentation, disk space for model files, sufficient RAM, and GPU acceleration when available for larger models.
